Java Quick Reference

Accessible methods from the Java library that may be included in the exam

String(String str)	String Class Explanation
and (octived str)	
weith PHI	Constructs a new String object that represents the same sequence of characters as str
String substring(int from,	Returns the number of characters in a String object
int to)	Returns the substring beginning at index from and ending at index to - 1
addstring(int from)	
	Returns substring(from, length())
boolean equals(String other)	Returns the index of the first occurrence of str; returns -1 if not found
int compareTo(String other)	Returns a value <0 if this is less than other; returns false otherwise
	this a value >0 if this is greater than other
Integer(int value)	Integer Class
Integer.MIN_VALUE	Constructs a new Integer object that represents the specified int value
Integer.MAX_VALUE	The minimum value represented by an int or Integer
int intValue()	The maximum value represented by an int or Integer
	Returns the value of this Integer as an int
Double(double value)	Double Class
double doubleValue()	Constructs a new Double object that represents the specified double value
acomptenatue()	Returns the value of this Double as a double
static int phase	Math Class
static int abs(int x)	Returns the absolute value of an int value
static double abs(double x)	Returns the absolute value of a double value
static double pow(double base, double exponent)	Returns the value of the first parameter raised to the power of the second parameter
static double sqrt(double x)	Returns the positive square root of a double value
static double random()	Returns a double value greater than or equal to 0.0 and less than 1.0
	ArrayList Class
int size()	Returns the number of elements in the list
boolean add(E obj)	Appends obj to end of list; returns true
void add(int index, E obj)	Inserts obj at position index (0 <= index <= size), moving elements at position index and higher to the right (adds 1 to their indices) and adds 1 to size
E get(int index).	Returns the element at position index in the list
E set(int index, E obj)	Replaces the element at position index with obj; returns the element formerly at position index
E remove(int index)	Removes element from position index, moving elements at position index + 1 and higher to the left (subtracts 1 from their indices) and subtracts from size; returns the element formerly at position index
	Object Class
boolean equals (Object other)
